

Three Piece Automobile Wheel

Abstract

5 The three piece automobile wheel is provided with an inner rim, an
outer rim, and a center disc. The center disc is attached to a flange section of
the inner rim and outer rim. A trough is established in the inner rim between
the flange section and rim flange. The outer side-wall of the trough nearest
10 disc, a valve opening passes through the outer side-wall for valve attachment,
and the configuration allows the valve base to be disposed inside the trough.
The center disc is provided with a through-hole region to expose the valve
stem to the outside.
